ISL Trunking delivers high performance enhanced trunking capabilities by aggregating up to four ISLs into a single logical 8 Gb Fibre Channel link. This license logically groups up to four e-ports to provide a high bandwidth Trunk between two switches. The switch operating system views the Trunk as a single, high bandwidth resource (up to 8 Gb) when routing connections between switches. Connections are load-balanced across the individual links, which comprise the logical trunk group. Each 16-port switch can have four separate 4-port Trunk groups. The result is improved performance, increased high availability, and simplified network design and management.

Main specifications:

Features

Compatibility: HP StorageWorks B-series 8-24

Packaging data

Package weight: 226 g
Package depth: 143 mm
Package height: 222.25 mm
Package width: 635 mm
