Office 2019 delivers new features to help end users create amazing content in less time. Updates include new and improved inking features across the apps, like the roaming pencil case, pressure sensitivity, and tilt effects; more powerful data analysis in Excel, like new formulas, new charts, and Power BI integration; and sophisticated presentation features in PowerPoint, like Morph and Zoom. These features are already included in Office 365 ProPlus but are not available in Office 2016.

Office 2019 also includes new IT value. We introduced Click-to-Run (C2R), a modern deployment technology, in Office 2013, and it's now used to deploy and update Office across hundreds of millions of devices worldwide. With Office 2019, we're moving the perpetual versions of Office to C2R exclusively so IT can take advantage of modern deployment technology to reduce costs and improve security. The advantages of C2R include predictable monthly security updates, up-to-date apps on installation, reduced network consumption through Windows 10 download optimization technology, and an easy upgrade path to Office 365 ProPlus. C2R offers the same enterprise-focused management capabilities as MSI-based products and will also support an in-place upgrade when you move to Microsoft Office 2019 from older MSI-based products.
