Highlights

Blocks and rejects junk email at the gateway, before it enters your network

Overview

With 94% of email classified as junk, sorting good email from bad can be an administrative nightmare. By adding Dell SonicWALL Comprehensive Anti-Spam Service (CASS) to a Dell SonicWALL firewall, your business can remove junk email at the gateway and quickly ensure the delivery of only good email to your email server. With one-click activation, businesses with up to 250 users can easily stop spam before it enters the network.

Overview

Comprehensive Anti-Spam Service

With 94% of email classified as junk, sorting good email from bad can be an administrative nightmare. By adding Dell SonicWALL Comprehensive Anti-Spam Service (CASS) to a Dell SonicWALL firewall, your business can remove junk email at the gateway and quickly ensure the delivery of only good email to your email server. With one-click activation, businesses with up to 250 users can easily stop spam before it enters the network.

Features

Quick activation

It takes only minutes to configure CASS, and only one click to activate. Once activated, CASS immediately starts to block spam, phishing and virus-laden email. MX Record redirection is not needed.

Saves bandwidth

Junk email is blocked and rejected at the gateway, before it enters your network.

Deployment

Smaller businesses can leverage their existing investment in a Dell SonicWALL firewall to quickly ensure the delivery of only good email with CASS. Larger enterprises can layer their anti-spam protection by placing CASS in front of a Dell SonicWALL Email Security solution.

Powerful protection

CASS offers 98% effectiveness against spam, dropping 80% of spam at the gateway, while utilizing advanced anti-spam techniques like Adversarial Bayesian filtering on remaining email.

Saves time

The Dell SonicWALL firewall becomes your single point of management for all traffic going through the device, including spam management.

Platform Features

Stop attacks with over 99% effectiveness

Block spam, phishing, zombie and virus attacks with over 99% effectiveness and ensure delivery of good email using proven, patented1 techniques like reputation checks, directory harvest attack (DHA) protection, Denial of Service (DoS) protection, adversarial Bayesian filtering, image analysis and sender validation.

Real-time threat information

Get the most up-to-date protection against new email attacks with real-time information from the Dell SonicWALL Global Response Intelligent Defense (GRID) Network and GRID Anti-Virus signatures.

Junk Box

Administrators can deploy or delete Junk Boxes for users to store junk messages. With optional Junk Box Summary emails, users can view text emails designated as junk, with IT retaining control over delivery of summaries and settings.

LDAP integration

Flexible LDAP integration enables easy and secure user management with support for multiple LDAP servers.

Advanced Reputation Management (ARM)

Dell SonicWALL Advanced Reputation Management utilizes Sender IP Reputation to drop junk email at the connection level, before it enters the network. Real-time reputation scores from the Dell SonicWALL GRID Network identify and block junk email from spammers.

Unique anti-phishing protection

Phishing emails are placed in a designated Phishing Folder, reducing the risk of having financial, personal or proprietary information lost through an email-based phishing attack.

Allow and Block lists

With Allow and Block lists, administrators can easily block or allow emails from specific people, company, and addresses on both a global and per-user basis.
