Dell SonicWALL Content Filtering Service (CFS) helps organizations and educational institutions enforce their productivity and protection policies and block inappropriate, illegal and dangerous Web content. Featuring a dynamic rating and caching architecture, Dell SonicWALL CFS blocks multiple categories of objectionable Web content and provides the ideal combination of control and flexibility to ensure the highest levels of productivity and protection. Data is forwarded directly to the Dell SonicWALL ViewPoint reporting package, delivering a high level of network visibility through graphs, charts and data search functionality. And as an added benefit, Dell SonicWALL content filtering is configured and controlled from the appliance, eliminating the need for a costly, dedicated filtering server.
