Hold crisp, clear multi-point videoconferences with up to five other remote sites.

The PCSA-MCG106 optional license key enables Multi-point Control Unit (MCU) software exclusively for the Sony PCS-XG100 Videoconferencing System.

With PCSA-MCG106 MCU software installed, the PCS-XG100 can be configured to communicate with up to five remote videoconferencing sites (six sites total) simultaneously, using either an IP (H.323 protocol) or ISDN (H.320 protocol) connection. 'Bridging' allows using any combination of IP and ISDN connections.

Two PCS-XG100 units - each installed with PCSA-MCG106 MCU software - can be cascaded to support large-scale multi-point conferences with up to ten sites simultaneously.

- Work more efficiently and productively: MCU software allows the PCS-XG100 to be configured for virtual meetings with up to five remote videoconferencing sites (six sites total).
- For maximum flexibility, participants at remote sites can connect using IP (H.323 protocol) or ISDN (H.320 protocol) - or any mix of IP and ISDN connections.
- Two PCS-XG100 Videoconferencing Systems can be 'cascaded' (via IP connection), supporting large-scale multi-point conferences with up to ten sites linked simultaneously.
