UTM Network Protection

No compromise network performance and security

Sophos Network Protection combines technologies to provide multi-layered Advanced Threat Protection. With command-and-control detection, Intrusion Prevention System (IPS) and VPN gateway, it protects your network by blocking harmful incoming and outgoing traffic and enables secure access for authorized users. The Sophos UTM makes it easy to control security risks whilst ensuring optimal performance tailored to your chosen deployment model.

Proven protection against exploits and intruders

Our Advanced Threat Protection provides a single pane of glass to identify and block even the most targeted attacks on your network. By combining command and control and Botnet detection, IPS patterns and Deep Packet Inspection, we identify and block application- and protocol-related probes and attacks. SophosLabs' extensive signature database of patterns and rules updates every few minutes. If you also enable Web Protection, you can add cloud- based sandboxing to analyze unknown files for malicious content and constantly improve protection.

Maximize your network performance

Our software and hardware is engineered to give you the throughput speeds you need. Cost- efficiently balance your Internet traffic among different WAN uplinks while using 3G/UMTS USB sticks for more connection options. Custom Quality-of-Service (QoS) options guarantee bandwidth availability for important outgoing network traffic.

Connect remote offices with configurationless VPN

It's easy to setup multiple site-to-site VPN tunnels with the same rules for load balancing and failover. And our configurationless Sophos Remote Ethernet Devices (RED) lets you fully share computers in both networks or limit the traffic that can travel over the tunnels. Set up requires no technical skill at the remote sites and supports host names for tunnels with a built-in Dynamic DNS client.

Secure access for remote workers

Our UTM user portal provides a broad set of industry-standard VPN technologies, including IPSec, SSL, Cisco VPN, iOS and native Windows VPN clients. Our unique HTML5 VPN Portal doesn't require ActiveX, Java or a client to install. And, it works on all platforms, from Windows and Macs to iOS and Android. Automatic login stores resource credentials on the device.

- Advanced Threat Protection prevents targeted attacks and APTs
- Integrated Intrusion Prevention System (IPS)
- Site to site VPN and remote access with secure SSL or IPsec
- Self-Service User Portal reduces your workload enabling users to help themselves
- Built-in reporting on all models
- Hardware, virtualized, software or cloud-based appliance

Main specifications:

License

License quantity:	1 user(s)
License type:	Open Value Subscription (OVS)
License term in years:	3 year(s)

Features

Compatibility:	SG 210
