We see more, analyze more and stop more online threats.

How long does it take for malware to infect your brand-new computer? If you use free or other inferior security software, maybe not long at all.

Cybercriminals are more sophisticated than ever before, and they use a diverse arsenal of tools to gain access to your information. Other security products just don't have the resources to keep up with new threats as they emerge.

But Norton products do. As the threats get worse, our products just keep getting better. Our teams of security experts are constantly analyzing new threats and devising new ways to protect your devices from them.

We focus exclusively on security, and we're the best at what we do.

Our concentrated combination of dedication and expertise benefits our customers. Norton products consistently outperform the competition in independent head-to-head tests, and only Norton products have won PC Magazine Editors' Choice Award 37 times, including 12 years in a row — more than any other security company.

What does that mean for you? When you buy Norton Security, you're getting one of the best security products on the market today. It's that simple.

We include a protection promise only Norton can make.

We're so confident in our ability to keep you secure, we offer a 100% guarantee: From the moment you subscribe, a Norton expert will help keep your devices virus-free or give you a refund2. You won't find a better promise than this from free or paid competitors.

Our multi-device, multi-OS protection helps keep your data safe, wherever it is.

The more connected you are and the more your personal information is out there, the more security you need. Do you watch videos or shop on your tablet? Use your smartphone to pay bills or check your balances? Your personal information is in multiple places. Keep it private across all of them.

Norton Security Deluxe provides one easy solution to protect your computers, smartphones and tablets, even on multiple operating systems: Windows, Mac, Android and iOS — and Windows 10.

Plus, only Norton shows you if that Android app you're about to download will impact your battery life, has potential privacy risks or contains malware, before you even install it from Google Play.
